In this section user can also edit some information's about the pictures such as IPTC and EXIF. By clicking on edit the modal will show for the user and can change the mentioned information's.

Delete the Data

If the user decide that he/ she does not want to continue with our website they can click on delete button and just click on yes.

What we proud of

We did some extra jobs such as login as a guest or uploading pictures and most important we made the whole website with ASP.Net Core and electron. What I can mentioned here is that we our team work was also really good plus we tried to write a clean code so everyone can understand easily what each method do.

What could we do better

I think for the first project with ASP.Net core we did a good job but of course in some areas we could do a better job to give an example is by 3 layer design we had a problem to understand exactly what business layer do but other than that I think we did good.
